Physical chemist with more than a decade of research experience in ultrafast spectroscopy and materials characterization. Investigated photophysics in chemical systems ranging from nano-materials and proteins to organic polymers and small molecules.

- Experienced **team project manager** with proven mentoring and leadership skills.
- Strong record of **effective communication** through research presentations and scientific writing, with **16 peer-reviewed publications** (and counting).
- **Adaptable** to varying projects, mastering new skills as needed to complete an assignment.
- Extensive experience in **instrument design and development**, including optics, software, and electronics.

Education

Ph.D., Chemistry August 2014
University of Colorado Boulder

B.S., Chemistry with Honors and Distinction; minor in Computer Science May 2009
University of North Carolina at Chapel Hill

Experience

Postdoctoral Researcher February 2018–present
Northwestern University, Department of Chemistry; Advisor: Lin X. Chen

- Led graduate students in the development and execution of collaborative research projects.
- Spearheaded a new project to study energy transfer in solar energy harvesting materials.
- Designed and built a time-resolved spectroscopy instrument and trained students in its use.

Postdoctoral Researcher August 2014–February 2018
Northwestern University, Department of Chemistry; Advisor: Elad Harel

- Advised graduate and undergraduate students on project development and publication of results, and trained them on experimental techniques.
- Designed and built highly-cited time-resolved spectroscopies, including 4D electronic–Raman spectroscopy, single-shot 2D spectroscopy, and compressive sensing detection.
- Probed electronic–vibrational coupling in CdSe quantum dots and photosynthetic proteins, demonstrating the strong interactions between excitons and phonons.

Research Assistant August 2009–August 2014
University of Colorado Boulder, Department of Chemistry and Biochemistry; Advisor: David M. Jonas

- Studied charge carrier dynamics in colloidal InAs and PbS quantum dots, exposing interactions between excitons within the same nanoparticle.
- Developed computational simulations for the modeling of multidimensional spectra.

Undergraduate Researcher

December 2007–May 2009

University of North Carolina at Chapel Hill, Department of Chemistry; Advisor: Tomas Baer

Eötvös Loránd University (Budapest, Hungary); Advisor: Bálint Sztáray

- Investigated UV photodissociation and thermochemistry of halo-alkanes and halo-silanes.

Technical skills

- **Spectroscopy** – two-dimensional electronic – transient absorption – UV-Vis – photoelectron
- **Optics and Lasers** – ultrafast optics – interferometry – laser pulse characterization (spatial, temporal, and spectral) – pulse shaping
- **Materials** – semiconductor nanomaterials (quantum dots) – organic photovoltaic polymers and small molecules – photosynthetic protein complexes
- **Experiment/instrument development** – robust optical design – high-speed data acquisition – technique characterization, calibration, and documentation
- **Software development** – instrument control and real-time synchronization – data acquisition – modular, object-oriented design
- **Analytical methods** – mass spectrometry – NMR – chromatography (HPLC, GC)
- **Data analysis and modeling** – signal and image processing – global analysis methods – linear and nonlinear optimization
- **Programming** – MATLAB – LabVIEW – C – Linux/Bash – Python – Mathematica – Fortran – Java
- **Electronic engineering** – analog – digital – microcontrollers – PCB design – test & measurement

Awards and Recognitions

Cover & Feature article in *The Journal of Physical Chemistry C*⁴

November 2018

“Four-Dimensional Coherent Spectroscopy of Complex Molecular Systems in Solution”

Featured in *Science*: 4D electronic-Raman spectroscopy⁹

June 2017
